Galaxies: Snapshots in Time

This sequence of NASA Hubble Space Telescope (HST) images of remote galaxies offers tantalizing initial clues to the evolution of galaxies in the universe.

(far left column)

These are traditional spiral and elliptical-shaped galaxies that make up the two basic classes of island star cities that inhabit the universe we see in our current epoch (14 billion years after the birth of the universe in the Big Bang). Elliptical galaxies contain older stars, while spirals have vigorous ongoing star formation in their dusty, pancake-shaped disks. Our Milky Way galaxy is a typical spiral, or disk-shaped galaxy, on the periphery of the great Virgo cluster. Both galaxies in this column are a few tens of millions of light-years away, and therefore represent our current stage of the universe's evolution.

(center left column)

These galaxies existed in a rich cluster when the universe was approximately two-thirds its present age. Elliptical galaxies (top) appear fully evolved because they resemble today's descendants. By contrast, some spirals have a "frontier" appearance, with loosely shaped arms of young star formation. The spiral population appears more disrupted due to a variety of possible dynamical effects that result from dwelling in a dense cluster.

(center right column)

Distinctive spiral structure appears more vague and disrupted in galaxies that existed when the universe was nearly one-third its present age. These objects do not have the symmetry of current-day spirals and contain irregular lumps of starburst activity. However, even this far back toward the beginning of time, the elliptical galaxy (top) is still clearly recognizable. However, the distinction between ellipticals and spirals grows less certain with increasing distance.

(far right column)

These extremely remote, primeval objects existed when the universe was nearly one-tenth its current age. The distinction between spiral and elliptical galaxies may well disappear at this early epoch. However, the object in the top frame has the light profile of a mature elliptical galaxy. This implies that ellipticals formed remarkably early in the universe while spiral galaxies took much longer to form.

OVERVIEW

The National Aeronautics and Space Administration (NASA) Space Grant College and Fellowship Program was established under Public Law 100-147, the NASA Authorization Act of 1988, to ensure continued U.S. strength in space-related research and education and to capitalize on the multiple opportunities afforded by the space environment.

Space Grant objectives, derived from the legislation, are to : (1) establish a national network of universities with interests and capabilities in aeronautics, space, and related fields; (2) encourage cooperative programs among universities, aerospace industry, and Federal, state and local governments; (3) encourage interdisciplinary training, research, and public service programs related to aerospace; (4) recruit and train professionals, especially women, underrepresented minorities, and persons with disabilities for careers in aerospace science and technology; and, (5) promote a strong science, mathematics and technology education base from elementary through secondary levels.

The three goals of the Space Grant program are to: (1) identify, maintain, and disseminate Space Grant programs that are proven to be effective; (2) devise and implement new Space Grant programs that address agency and national education initiatives; and, (3) expand the Space Grant network by continuing to develop partnerships with external constituencies, such as professional societies and Land Grant and Sea Grant University programs.

Through the Space Grant program, NASA has successfully forged a network of participating universities and other institutions in all 50 states, the District of Columbia, and Puerto Rico. The 52 Space Grant State Consortia currently consist of 395 institutions of higher education, 66 industry affiliates, 26 state/local government offices, 40 nonprofit organizations, and 25 other education entities. Space Grant affiliates include many of the Nation's research-intensive universities, as well as private academic institutions, four-year institutions, and community colleges. Also included are 38 Historically Black Colleges and Universities (HBCUs), 9 Hispanic-Serving Institutions (HSIs), 5 Native American Institutions, and 10 Other Minority Institutions (OMUs). Contacts at each of these institutions are included in this directory.

The majority of the 52 consortia are aligned into five regional consortia for the purposes of sharing information and conducting cooperative projects. Communication between NASA and state consortia is facilitated via an Internet distribution node. Further, University Affairs Officers at NASA Field Centers perform liaison between consortia members and NASA researchers.
